Biological Solutions

- Bio-liquid for waste water treatment
- Bacteria based non-hazardous liquid
- Drastically reduces sludge volumes
- Removes odors, enhances bio degradation
- Waste Water Treatment plants (WWTP)
- Scalable options, incl Bio-liquid
- Decentralized or connected to grid
- Turn key solution

Biological water sanitation

Bacteria based liquid with micro-organisms which degrades pollutants and breaks down organic waste.

Bio-liquid significantly reduces harmful pollutants in wastewater, contributing to the reduction of odors easing the quality of life. It accelerates the breakdown of organic waste resulting in reduced sludge volume disposal costs. FTS System saves >60% of water resources by re-using waste water. No sewage connection or municipal infrastructure required. Prevents groundwater pollution and health risks. Decentralized system (DEWATS) for schools/hospitals or communities with thousands of households. Exceeds Green Council of South Africa's water saving requirements.

Solution description.

Bio-liquid

- Blend of natural micro organisms
- NO chemicals
- Reduces odors and sludge

FTS System

- Innovative waste water treatment solution
- Re-cycling and re-using of water
- Fully biological
- Effluent ready for use in toilet sanitation, crop irrigation and gardening.

Natural based bacteria is added into the waste water pools,

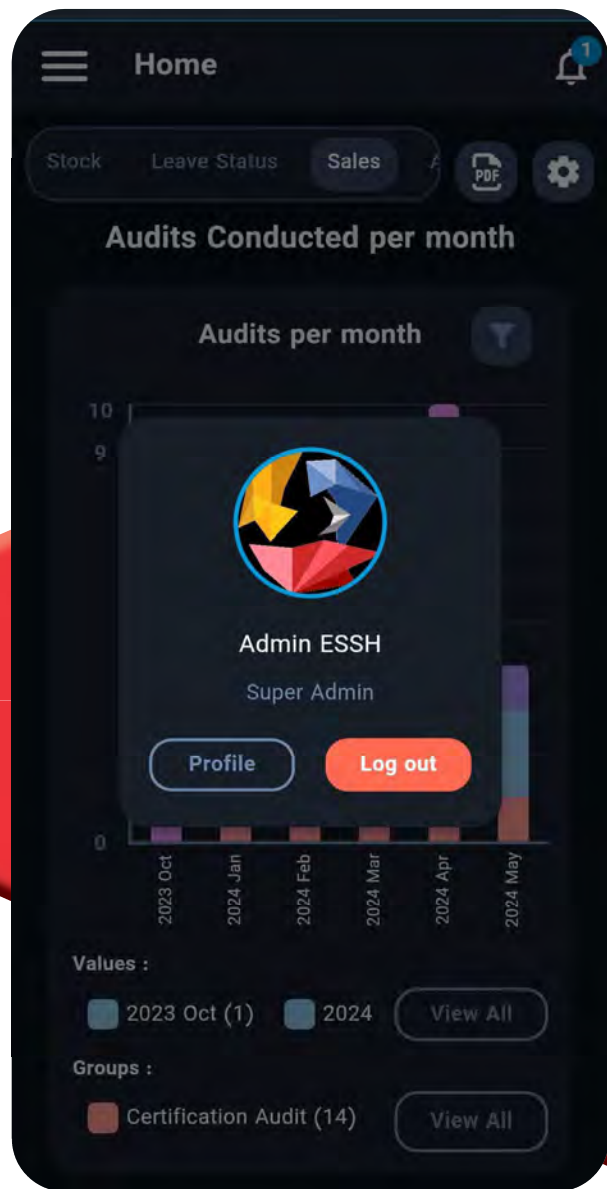

The good bacteria inside the bio-liquid breaks down:

- Natural gasses, which separate into the air
- Water, that is reused.

Bacteria found in the soil will further continue to cleanse the water.

Effortlessly manage compliance and operations
